

# Proven solutions for warehouse operations

## ARC LESs

Logistics Execution System for serialization is the operating system of the warehouse that is responsible for post-packaging serialization processes.

## LESs Workstation

The focal point of serialized operations in your warehouse:

- Industrial PC
- Large touchscreen monitor
- Network-connected label printer
- Wireless handheld scanner

ARC LESs workstations provide the missing link in your site: **Serialized item operations**. Your manufacturing site capabilities are complemented with best-in-class warehouse operations.

ARC LESs manages inbound and outbound movements and serialized warehouse operations:

### Comprehensive management

- Rework of serialized items - independent from the technology of the packaging line
- One-touch / easy scan shipment
- Rich inbound goods management with return quality control and rerouting

### Reliable and flexible components

- Responsive due to fast connection to on-site data repository
- Integrates with a wide selection of label printing technologies
